SURVEY FORM

EDISON & DAY®

When ordering care home curtains with Edison & Day, we require accurate measurements for our made-to-measure service to ensure the best finish to your room. Follow the simple guide below to provide the best results:

Step A: Measure your existing track or pole width. If no existing track, measure the length you require the track or pole to be.

Step B: Measure your required drop from top of the pole or track, down to where you would like the curtains to finish.

Step C: Supply a photograph of the window (undressed) if advice is required by Edison & Day

Window Number	Track/Pole Width	Curtain Drop (MM) From top of pole/track

For any questions or queries relating to the measuring of curtains for your care home please contact the Account Manager
